Prime Numbers

Let's try to factor the number 17. The only way we can do it is like this:

$$\begin{array}{c} \cancel{17} \\ \wedge \\ 1 \cdot 17 \\ \boxed{17 = 1 \cdot 17} \end{array}$$

We still end up with a 17, so you can see that we really didn't break down the 17 into two smaller numbers. In fact, that's impossible to do without using fractions.

A number, like 17, that can only be factored into 1 times itself is called a **prime number**.

5 is also a prime number, since $1 \cdot 5$ is the only way it can be factored using whole numbers.

Can you think of some more prime numbers? (Note: 1 is not considered a prime number. 2 is the smallest prime number.)

Try to factor each number into a product of smaller numbers. If a number is prime, draw a circle around it.
